Es ist systembedingt, daß während der Aufheizzeit Wasser durch Ausdehnung am Auslauf abtropft. Dieser freie Austritt verhindert einen Druckanstieg im Speicher. Es darf deshalb niemals der Auslauf verschlossen werden. Der Einbau eines Luftsprudlers oder Schlauches mit Strahlregler ist nicht zulässig. Der im Batteriekörper eingebaute Durchflußbegrenzer macht die Armatur unabhängig vom vorhandenen Wasserdruck. Einregulieren der Wassermenge ist nicht erforderlich. Der Durchflußbegrenzer darf nicht entfernt werden!

As the water heats up, it will expand & possibly discharge through the outlet. This water discharge is normal to prevent pressure damage to the hot water vessel. DO NOT close this outlet. Aerator or hose with flow-straightener should not be used either. The built in flow limiter regulates the supply water pressure, therefore it is not necessary to use other regulating devices to control the flow. DO NOT remove the flow limiter!

Set of 3 parts for different temperature stop limits

	P	bar		MAX. 10		5			Q	(3 bar)
	T	°C		MAX. 80		65			l/min	XX
