IMPORTANT SAFETY ADVICE

The shower head and hose supplied with this product are a safety critical part of your shower. Failure to use genuine Triton parts may cause injury and invalidate your guarantee.

INSTALLATION AND OPERATING INSTRUCTIONS

Please read this book thoroughly and familiarise yourself with all instructions before commencing installation and keep it for future reference.

The mixer shower installation **MUST** be carried out by a suitably qualified person, **in the sequence of this instruction book.**

INSTALLERS PLEASE NOTE THESE INSTRUCTIONS ARE TO BE LEFT WITH THE USER

To check the product suitability for commercial and multiple installations, please contact Triton's specification advisory service before installation.

Telephone: 024 7637 2222

E mail: technical@tritonshowers.co.uk

All dimensions listed in this fitting book regarding the product and installation are approximate.

*All kits are for illustration purposes only and are not supplied unless otherwise stated.

Note: Water inlet and outlet fittings are **NOT** supplied with this product.
 Water inlets require **x2 1/2" BSP fittings**.
 Water outlet requires **x2 1/2" BSP fitting**.

INTRODUCTION

This book contains all the necessary fitting and operating instructions for your mixer shower. Please read them carefully and read through the whole of this book before beginning your installation.

Care taken during the installation will give a long and trouble free life from your mixer shower.

SITE REQUIREMENTS

The installation must be in accordance with water supply (water fittings) regulation 1999 and/or local Bylaws.

Maximum static pressure (Bar)	10
Flow pressure, Hot & Cold (Bar)	0.5 to 5
Hot supply temperature (°C)	55 to 65
Cold supply temperature (°C)	Equal to or less than 25

This mixer shower is designed for high pressure systems found in the UK, but can be installed with low pressure gravity water systems with reduced flow rates.

For effective operation of the internal seals, the maximum static pressure must not be exceeded.

A stored water temperature of 60°C is considered sufficient to meet all normal requirements and will minimise the effects of scale in hard water areas.

Pressure reducing valve

On sites where the running pressure is above 5 bar, the use of a suitably sized pressure reducing valve fitted in the cold mains supply pipework can provide nominally equal pressures at the mixer shower.

Water minimum flow rate

For best performance within the specified running pressure range a minimum flow of 8 litres per minute should be available to both inlets.

Water temperature adjustment and thermal safety

The mixed water temperature can be adjusted from cold through to a top limit which must be preset during installation with full anti-scald protection throughout the range (35°C to 40°C) providing the hot water temperature at the inlet remains 10°C above the outlet temperature.

Should there be a loss of flow to either incoming supply then water from the shower will stop or be reduced until both supplies are restored.

SAFETY WARNINGS

- a. **DO NOT** choose a position where this shower could become frozen.
- b. **DO NOT** connect this shower to any form of tap or fitting not recommended by the manufacturer.
- c. **DO NOT** allow the inlet pressure or flow rates to operate outside the guidelines laid out in Site Requirements.
- d. **DO NOT** connect the shower to a gravity hot supply and a mains cold supply or vice versa.

Approvals

This mixer shower has the following approval:

- **WRAS**

PLUMBING REQUIREMENTS

DO NOT use jointing compounds on any pipe fittings for the installation.

DO NOT solder fittings near the mixer shower as heat can transfer along the pipework and damage the shower.

DO NOT subject the unit to a water temperature above 80°C during installation, use, maintenance or disinfection.

IMPORTANT:

- The layout and sizing of pipework **MUST** be such that nominally equal inlet supply pressures are achieved and the effects of other draw-offs are minimised.
- The pipework should be installed such that other taps and appliances being operated elsewhere on the premises do not significantly affect the flow
- When connecting pipework avoid using tight 90° elbows; swept or formed bends will give the best performance.
- The hot water pipe entry **MUST** be made to the left-hand side inlet, marked HOT, 'H' or with a red/orange label.
- Suitable isolating valves (complying with Water Regulations and Bylaws) **MUST** be fitted on the hot and cold water supplies to the shower as an independent means of isolating the water supplies should maintenance or servicing be necessary; position as close as is practicable to the water supply inlets of the mixer shower. If this isolator is fitted in a loft space, the loft must have a fixed access ladder and be boarded, with appropriate lighting from the access point to the isolator.
- It is preferable to flush the pipework to clear the system of debris and check for leaks before connecting to the mixer shower.
- The mixer shower inlets contain removable filters that may become blocked if debris is not flushed through before fitting.

Commercial applications

- It is recommended that for all commercial applications, easily accessible, in-line filters are used to aid maintenance.

Hard water areas

- a. If it is intended to operate the shower in areas of hard water (above 200-ppm temporary hardness), a scale inhibitor may have to be fitted. For advice on the scale inhibitor please contact Triton's Customer Experience team.
- b. For best performance the shower head **MUST** be regularly cleaned to remove scale and debris.

WATER SYSTEM REQUIREMENTS

This mixer shower is suitable for:

- Gravity water systems
- Pumped gravity systems
- Fully modulating type combination boilers
- Multi-point hot water heaters
- Thermal storage
- Unvented systems

When installing this mixer shower with a combination or multi-point boiler, it may be necessary to install flow regulation.

Check that the appliance is capable of delivering hot water at a minimum switch-on flow rate of 3 litres per minute. At flow rates between 3 and 8 litres per minute, the appliance **MUST** be capable of raising the water temperature to 52°C minimum.

Water temperature at the inlet of the mixer valve **MUST** remain relatively constant when flow rate adjustments are made - refer to the appliance operating manual to confirm compatibility with this mixer shower.

Where thermal store systems and instantaneous gas water heaters are used, if excessive draw-off takes place, the appliance may not be able to maintain an adequate output temperature. This could result in the shower temperature becoming noticeably cooler.

Flow regulators can be fitted with high-pressure water systems to reduce flow rate and assist economy.

The hot supply temperature **MUST** remain a minimum of 10°C hotter than the required blend temperature for optimum performance.

Fig.3

*Diagrammatic view – not to scale.
For illustration purposes only.

TYPICAL DOMESTIC INSTALLATIONS

Domestic gravity fed systems (fig.3)

The mixer shower **MUST** be fed from a cold water cistern and hot water cylinder providing nominally equal pressures. There **MUST** be a minimum of one metre head of water. The minimum head distance is measured from the base of the cold water cistern to top of the shower head.

Fig.4

*Diagrammatic view – not to scale.
For illustration purposes only.

Pumped gravity fed systems (fig.4)

The mixer shower **MUST** be fed from a cold water cistern and hot water cylinder providing nominally equal pressures.

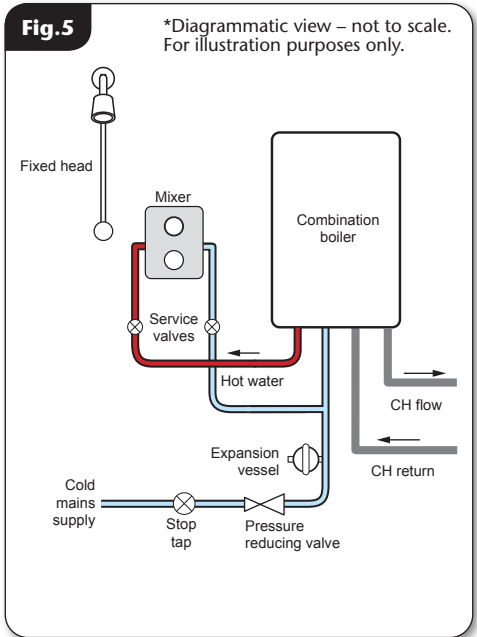

The mixer shower may be used with a gravity fed system with a pump to boost pressures as shown; please refer to the pump installation guide to establish the minimum head requirements for automatic operation of the pump.

Instantaneous gas-heated systems, e.g. combination boilers (fig.5)

The mixer shower **MUST** be installed with a multi-point gas water heater or combination boiler of a fully modulating design i.e. to maintain relatively stable hot water temperatures.

A drop tight pressure reducing valve **MUST** be fitted if the supply pressures exceed 5 bar running.

An expansion vessel **MAY** be fitted and regularly maintained, to prevent the mixer being shower damaged by excess pressures. This may already be installed within the boiler (check with manufacturer) and is in addition to the normally larger central heating expansion vessel.

Unvented mains pressure systems (fig.6)

The mixer shower can be installed with an unvented, stored hot water cylinder.

For systems with no cold water take off after the appliance reducing valve, it will be necessary to fit an additional drop tight pressure reducing valve when the mains pressure is over 5 bar. The drop tight pressure reducing valve must be set at the same value as the unvented package pressure reducing valve.

NOTE: An additional expansion vessel may be required if a second pressure reducing valve is installed. This does not apply to packages with a cold take off after the pressure reducing valve to the cylinder.

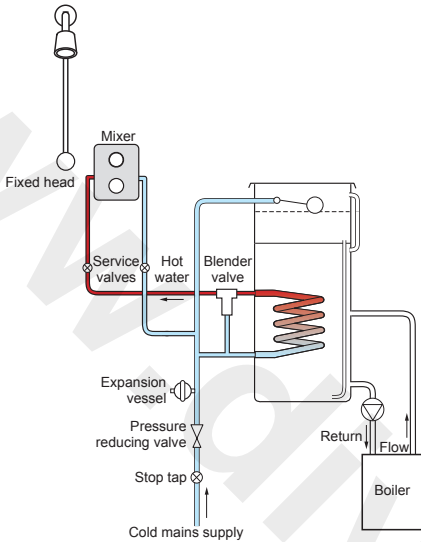

Fig.7

*Diagrammatic view – not to scale.
For illustration purposes only.

Mains pressurised thermal store systems (fig.7)

Packages of this type, fitted with a tempering valve (blender valve) can be used. A drop tight pressure reducing valve **MUST** be fitted if the supply pressures exceed 5 bar running.

An expansion vessel **MUST** be fitted and regularly maintained to ensure the unit is not damaged by excess pressures. This may already be installed externally or internally within the thermal store (check with thermal store manufacturer).

INSTALLATION

Preparing the mixer valve

Check the contents to make sure all parts are present.

Before starting the mixer shower installation, make sure all the openings on the shower are carefully covered to stop ingress of any debris etc. while routing the supply pipework.

The mixer shower is suitable for built-in installation in:

- a solid wall
- a stud partition wall
- dry lined wall
- fixing to a shower cubicle or panel

Siting of the shower and accessories

Refer to **fig.8** for correct siting of the shower.

The mixer shower should be positioned as detailed, with all controls within comfortable reached of the user.

The accessories (shower head, riser rail and/or fixed shower head) can be positioned above or to either side of the shower.

Supply pipework

Complete the pipework to the shower area having decided on the position of the shower and direction of pipe entry, for example rising, falling or rear entry.

The hot and cold water pipes should not be permanently attached to the wall within one metre of the valve, before installation is complete, to allow for final adjustment of the valve position.

For rear entry supplies, use a spirit level to mark the route of incoming hot and cold water supply pipes.

NOTE: The distance between centres will be determined by the fittings used (**fig.9**).

Fig.8

*Diagrammatic view – not to scale.
For illustration purposes only.

Fig.9

Typical building-in dimensions

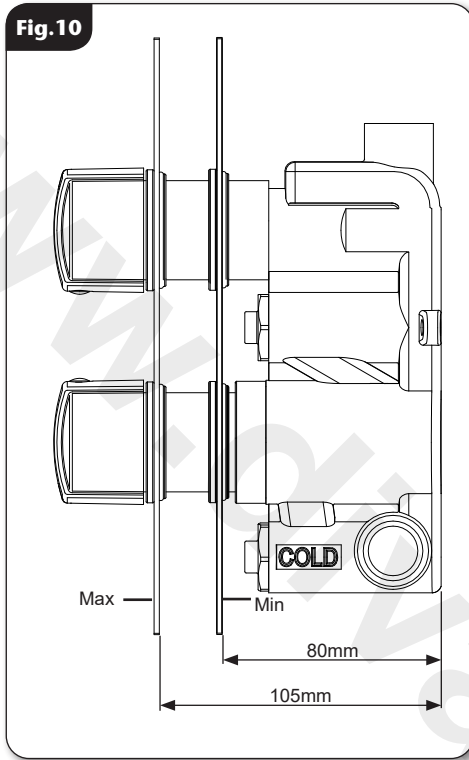

Fig.10

BUILT-IN FITTING

The following are typical thicknesses and are given as a guide only:

Tile	6 – 10mm
Adhesive	2 – 3mm
Plasterboard	9.5 – 12.5mm
Plaster finish	2 – 3mm

Maximum tile thickness to be 10mm.

When installing into a stud partition or other hollow wall structure, the installer may wish to consider building rear supports or other options for fitting the mounting plate. Such options are beyond the scope of this guide.

Use the supplied cover plate or tiling shroud as a template when cutting the opening for installing the shower into a solid wall, stud partition or hollow wall structure.

The building-in depth for the mounting plate is given in **fig.10** but this is dependent upon tile and adhesive thicknesses.

The inlet elbows allow for either rising, falling or rear entry hot and cold water supplies.

NOTE: To ease future requirements for cleaning and maintenance of the shower, it is advisable to route both the incoming and outgoing pipework from the same direction. Access to the integral strainers will also be improved with this layout.

Installation in a solid wall

Decide on the shower position and determine whether the hot and cold water supplies will enter the shower from top (falling) or bottom (rising) or rear (**fig.11**).

As a guide for the size of hole, it should be large enough to accept the valve complete with the inlet and outlet fittings and also allow access for connection to the pipework.

Remove the plaster and brickwork to the required depth and chase out any additional areas of the wall to give access to the pipework to and from the mixer shower plus any outlet fittings. Note that the shower body requires a deeper recess than the inlet and outlet fittings.

NOTE: The outlet pipework must end in a suitable female thread parallel 15mm x ½" BSP fitting (not supplied).

Offer the mixer shower up to the wall and mark the fixing holes. Remove the shower, drill and plug the wall. Route the pipework to the mixer shower position.

Installation in a hollow wall

Decide on the shower position and determine whether the hot and cold water supplies will enter the shower from the top (falling) or bottom (rising) or rear (**fig.11**).

When installing into a stud partition or other hollow wall structures, the installer will need to consider building rear supports or other options. Such options are beyond the scope of this guide.

Mark the route of the incoming and outgoing pipework.

Take out the plasterboard - use the cover plate as a template. Offer the shower up to the fabrication and mark the fixing holes.

Remove the shower and drill the holes. Route the pipework to the mixer shower position.

Installation in a panel wall or cubicle

When installing into a panel or cubicle structure the installer will need to consider building rear supports or other options. Such options are beyond the scope of this guide.

IMPORTANT: Access to the rear of the mixer shower must be available.

The controls require two holes to be cut out of the panel or cubicle. Use the face plate as a template to mark the hole positions then extend further to allow access for the filters.

Route the pipework to the mixer shower position.

Fig.12

FITTING THE SHOWER

Mark the position of four locating screws (fig.12).

Drill and plug the wall. An appropriate drill bit should be used. If the wall is brick, plasterboard or a soft building block, appropriate wall plugs and screws should be fitted.

IMPORTANT: Make sure that all supply pipework has been flushed through before fitting the mixer shower (fig.13).

Connect the hot water supply to the inlet marked HOT, 'H' or red/orange label and connect the cold water supply to the inlet marked COLD, 'C' or blue label.

Tighten all compression fittings.

Secure the mixer shower to the wall.

The threaded connector should protrude from the finished wall surface between 8mm and 13mm.

LEAK TESTING

Direct the outlet of the mixer to waste. Open the isolating valves to the shower and check for leaks. Remedy any leaks found.

Fig.13

MAKING GOOD

Make good the wall and complete the tiling

If the tiles are accurately cut, then the coverplate will seal around the hole in the tiles and the mixer shower will be able to be removed from the wall without the need to break any tiles.

Make sure the grout lines around the shower are flush with the tiles in order to provide a smooth sealing surface for the coverplate.

ANTI-SCALD PROTECTION

It is important that the mixer shower is tested regularly to prevent the risk of scalding and guarantee user safety. This can be carried out as follows: with the mixer blend temperature set at 38°C isolate the cold water supply. The outlet flow rate will reduce to a safe level.

Fitting the coverplate

Fit the coverplate over the valve body and slide tight to the wall.

Make sure the seals in the openings stay in place as they slide over the shower body. A smear of liquid soap on the seal will ease this procedure.

To prevent water ingress, seal the cover plate with a bead of silicon sealant on the under side of the cover plate (**fig.14**).

COMMISSIONING

Start the water flow by rotating the flow control.

Make sure that both the hot and cold water supplies are fully open and at (or near to) their design temperature and pressures and are within the requirements as stated on **page 2**.

Make sure the temperature control is at the maximum temperature setting.

Allow the shower to run at the maximum temperature setting until the water temperature has stabilised. Rotate the temperature control until your desired maximum showering temperature is reached.

The mixer shower has a temperature stop to prevent accidental rotation to higher temperatures. This is adjustable to provide a maximum temperature of 35°C – 40°C and should be checked on site to guarantee user safety.

The following is recommended for domestic installations but must be carried out for commercial installations: Check the thermal shut off facility of the mixer shower by performing a thermal shut off test.

Shut off the cold supply. The flow from the mixer shower should stop immediately or reduce to a trickle in which case the water temperature should be less than 43°C. In either case, there is no risk of scaling.

If, however, the temperature is above 43°C then it is likely there is contamination in the mixer shower stopping it from shutting off the hot supply. In this case refer to the maintenance section or contact Triton Customer Experience.

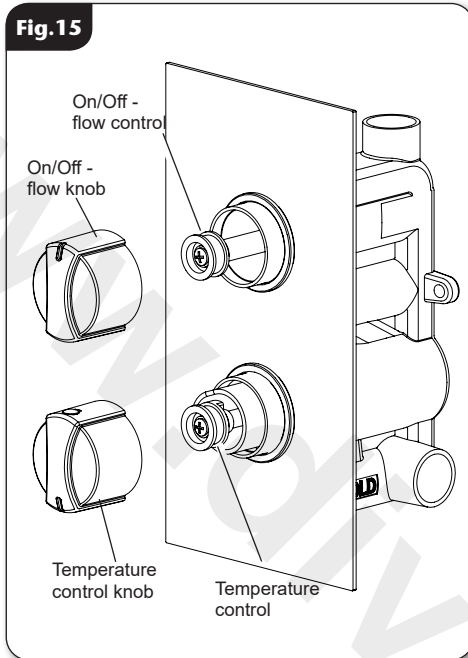

Fig.15

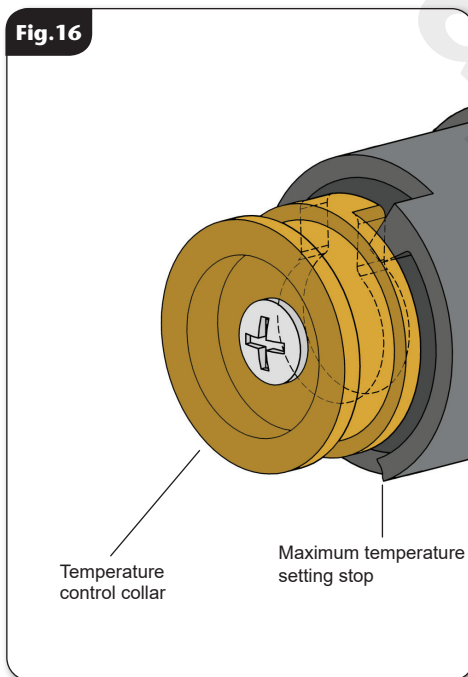

FITTING THE CONTROL KNOBS (fig.15)

There are two knobs supplied - on/off flow control and a temperature control.

With the position indicator pointing upwards, fit the on/off flow control knob onto the top flow control and secure using the screw supplied.

With the position indicator pointing downwards, fit the temperature control knob onto the bottom temperature control and secure using the screw supplied.

Fig.16

ADJUSTING THE MAXIMUM TEMPERATURE SETTING (fig.16)

Triton recommends 38°C as a comfortable bathing temperature for children and adults.

Important: The mixed water temperature must never exceed 46°C)

The mixed water temperature can be adjusted from cold through to a top limit (which can be pre-set during installation – factory set at approximately 38°C) with full anti-scald protection throughout the range.

To adjust the temperature, turn the shower on and allow time for the water to stabilise at it's maximum set temperature.

Remove the temperature control knob.

Remove the screw from the temperature control collar and adjust the position of the collar on the spindle.

When the showering temperature is satisfactory, resecure the collar, refit the control knob and turn off the shower.

OPERATING THE SHOWER (fig.17).

To start the shower, rotate the flow control anti-clockwise.

To stop the shower rotate the flow control back to the OFF position.

To adjust the water temperature, rotate the temperature control to the desired temperature.

Fig.17

PRODUCT FLOW RATES - For guidance only

Flow Rate (l/m)	3.4	5.2	6.9	8.1	9.3	13.9	20.4	25.2	29.2	32
Pressure (bar)	0.1	0.2	0.3	0.4	0.5	1.0	2.0	3.0	4.0	5.0

Conditions for test

Inlet temperatures comply with EN1111 requirements.

Outlet Temperatures 38°C.

Flow Control open.

Open outlet - No hose or shower head connected.

MAINTENANCE

The following maintenance procedure must be carried out for commercial and health care premises, but is not necessarily required for domestic installations.

Maintenance of the mixer shower is required to give continued performance after installation and that it continues to provide scald prevention.

NOTE: A thermostatic mixer shower in need of maintenance can be undetectable in normal use and only becomes apparent when a disruption occurs in the hot or cold water supply temperatures or pressures.

The frequency of routine maintenance of the internal of the shower will depend mainly on the water supply condition. Experience of local conditions will dictate the intervals for inspection and in-service testing. Guidance has been given below which can be adjusted for local requirements.

- a) Initially check the filters for debris once every three months and clean if necessary.
- b) Perform a thermal shut off test every three months, and check the maximum temperature setting. See the Commissioning section for the details of this test and readjustment of the maximum temperature setting if required.
- c) If the maximum water temperature varies by more than 2°C from the commissioned setting then carry out the following checks
 - Check the isolating valves are fully open.
 - Check the internal surface for scaling.

If the body requires descaling then it should be removed from the pipework to carry out this work (all rubber parts **MUST** be removed before descaling).

- Check the function of the non-return valves.

The non-return valves (NRVs) prevent cross-flow between hot and cold supplies under unequal pressure conditions. They are designed for long life with no maintenance.

If these checks do not highlight the reason for the temperature variation, then internal components will require replacement - please see the Spare Parts.

Cleaning

It is recommended that all products are cleaned using warm, soapy water.

Do not use powerful, abrasive or aggressive chemical cleaning products as this may damage the product and fittings and invalidate your guarantee.

Cleaning the filters (fig.A)

It is advised that this should be carried out by a qualified person.

- Turn off the water supplies before starting.
- To gain access to the filters remove the filter housings nut from the front of the unit.
- Remove the check valve and filter.
- Wash the filter thoroughly under running water, use a suitable brush to remove all debris.
- Reassemble in reverse order.

Disinfection

Where chlorine is used for the disinfection of water systems all relevant guidelines and approved codes of practice must be strictly followed. Failure to comply with the relevant guidelines and approved codes of practice may invalidate your guarantee.

FAULT FINDING

The following can be carried out by a competent person

Problem	Cause	Action
1 Water too hot.	1.1 Temperature control incorrectly commissioned.	1.1.1 Refer to commissioning section.
	1.2 Not enough cold water flowing through shower.	1.2.1 Reposition the temperature control.
	1.3 Increase in the ambient cold water temperature.	1.3.1 Reposition the temperature control.
	1.4 Cold water supply blocked.	1.4.1 Turn off shower and consult a competent plumber or contact Triton Customer Experience.
	1.5 High volume of cold water drawn off elsewhere.	1.5.1 Reduce the simultaneous demand from the mains supply.
2 Water too cold.	2.1 Temperature control incorrectly commissioned.	2.1.1 Refer to commissioning section.
	2.2 Not enough hot water flowing through shower.	2.2.1 Reposition the temperature control.
	2.3 Decrease in the ambient cold water temperature.	2.3.1 Reposition the temperature control.
	2.4 Insufficient hot water supplies from the heating system.	2.4.1 Make sure heating appliance is set to maximum or has sufficient stored hot water.
		2.4.2 Make sure heating appliance is igniting by trying a hot water tap elsewhere.
2.5 Hot water supply blocked or restricted.	2.5.1 Turn off shower and consult a competent plumber or contact Triton Customer Experience.	

FAULT FINDING

Problem	Cause	Action
3 Water does not flow or shower pattern collapses when another outlet is turned on.	3.1 Water supplies cut off.	3.1.1 Check water elsewhere in house and if necessary contact local water company.
	3.2 Shower unit blocked.	3.2.1 Inspect the filters. Clean if necessary.
	3.3 Blockage in pipework.	3.3.1 Turn off the shower and consult a suitably competent plumber.
	3.4 Shower head blocked.	3.4.1 Clean the shower head.
	3.5 System not capable of supplying multiple outlets at the same time.	
		3.5.2 Check if there is sufficient water pressure.
The following is recommended for a professional qualified installer only		
4 Water too cold.	4.1 Running pressure is excess of maximum recommended.	4.1.1 Fit a pressure reducing valve.
5 Shower controls noisy when in use.	5.1 Running pressure in excess of maximum recommended.	5.1.1 Fit a pressure reducing valve.
6 Shower will not shut off.	6.1. Pipework not flushed out before connecting to the unit. Internal components damaged.	6.1.1 Service valve.

www.divapor.com

UK SERVICE POLICY

In the event of a product fault or complaint occurring, the following procedure should be followed:

DO NOT REMOVE THE PRODUCT

1. Telephone Customer Experience on **024 7637 2222** having available your details including post code, the model number and power rating of the product, together with the date of purchase and, where applicable, details of the particular fault.
2. If required, the Customer Experience Advisor will arrange for a qualified engineer to call.
3. All products attended to by a Triton service engineer must be installed in full accordance with the Triton installation guide applicable to the product. Every product pack contains an installation guide, however, they can also be downloaded free at www.tritonshowers.co.uk.
4. Our engineer will require local parking and if a permit is required, this must be available to the engineer on arrival at the call.
5. If loft access is required for isolation or to complete a repair, the loft must have a fixed access ladder and be boarded, with appropriate lighting from the access point to and around the repair area.
6. It is essential that you or an appointed representative (who must be over 18 years of age) is present for the duration of the service engineer's visit. If the product is in guarantee you must produce proof of purchase.
7. Where a call under the terms of guarantee has been booked and the failure is not product related (i.e. scaling and furring, incorrect water pressure, pressure relief device operation or electrical/plumbing installation fault) a charge will be made. A charge will also be issued if nobody is at the property when the service engineer calls or adequate parking/permit is not available.
8. If the product is no longer covered by the guarantee an up-front fixed fee will be charged before the site visit.
9. Your receipt must be retained as proof of purchase. Should proof of purchase not be available on an 'in-guarantee' call, or should the service engineer find that the product is no longer under guarantee, the engineer will charge the same fixed price and will request payment prior to departing. If payment is not made on the day an administration charge will be added to the fixed charge.
10. If a debt is outstanding from a previous visit, or from any other Triton purchase, Triton reserves the right to withhold service until the debt has been settled.
11. Triton takes the health, safety and wellbeing of its employees very seriously and expects customers to treat all staff members with respect. Should any employee feel threatened or receive abuse, either verbally or physically, Triton reserves the right to withhold service.

Replacement Parts Policy

In line with AMDEA guidelines, Triton retains functional spares for as long as there is a market for them and in most cases, well beyond. Due to the vast array of product types, the life cycle of products can vary and therefore so can the length of time parts can be supplied. Spare parts can be ordered via our online spare parts store or by telephoning our Triton Customer Experience team on **024 7637 2222**. Payment should be made by credit / debit card (excluding American Express or Diners Card). Payment can also be made by pre-payment of a pro-forma invoice, by cheque or postal order.

Telephone orders are based on information given during the call. Before contacting Triton, please verify your requirements using the Information contained in the user guide. Triton cannot accept liability for incorrect part identification.

Warwickshire, CV11 4NR

Triton is a division of Norcross Group (Holdings) Limited

Triton reserve the right to change product specification without prior notice. E&OE. © TRITON SHOWERS 2020

TRITON UK STANDARD GUARANTEE

This guarantee applies only to products installed within the United Kingdom and does not apply to products used expressly for commercial gain, unless this use has been specified by Triton. This guarantee does not affect your statutory rights.

With the exception of accessories, Triton guarantee the product against all manufacturing defects for a period of **5 years** for use in a domestic environment from the date of purchase, provided that it has been installed by a competent person in full accordance with the fitting instructions.

All accessories such as shower heads, hoses and riser rails carry a **1 year** parts only guarantee against manufacturing defects.

Any part found to be defective during this guarantee period we undertake to repair or replace at our option without charge, so long as it has been properly maintained and operated in accordance with the instructions and has not been subject to misuse or damage or the effects of limescale build up. This product must not be taken apart, modified or repaired except by a person authorised by Triton.

What is not covered:

1. Breakdown due to:
 - a) use other than domestic use by the property occupants;
 - b) wilful act or neglect;
 - c) any malfunction resulting from the incorrect use or quality of electricity, gas or water or incorrect setting of controls;
 - d) failure to install in accordance with this installation guide.
2. Claims for missing parts once the product has been installed.
3. Repair costs for damage caused by foreign objects or substances.
4. Total loss of the product due to non-availability of parts.
5. Compensation for loss of use of the product or consequential loss of any kind.
6. Call out charges due to an abortive visit or where no fault has been found with the appliance.
7. The cost of repair or replacement of isolating switches, electrical cable, fuses and/or circuit breakers or any other accessories installed at the same time. Replacement of the Pressure Relief Device that only activates when the shower outlet is blocked is also excluded.
8. The cost of routine maintenance, adjustments, overhaul modifications or loss or damage arising therefrom, including the cost of repairing damage, breakdown, malfunction caused by corrosion, furring, frost or exposure to freezing conditions.
9. Call out charges where the water supply cannot be isolated, this includes consequential losses arising from unserviceable supply valves, or inaccessible product or valves located in a loft space without suitable access.

For the latest Terms & Conditions please see:

www.tritonshowers.co.uk/terms
